The significance of economic knowledge in the environmental sustainability discourse

Karl Bruckmeier, Dr. rer. pol.

Professor emeritus, National Research University –
Higher School of Economics, Moscow, Russia

Sustainable development is since three decades supported by national and international policies, but environmental improvements are limited. To enhance the sustainability process, a critical review of knowledge use practices is required. Economic knowledge needs to be integrated in interdisciplinary approaches to make better use of social and natural scientific research for solving problems of resource scarcity and environmental pollution.

Přednáška je součástí cyklu Pluralismus v ekonomii a konference INPROFORUM: Innovations, Enterprises, Regions and Management. Vstup volný.

The lecture is part of the series Pluralism in Economics and conference INPROFORUM: Innovations, Enterprises, Regions and Management. Free entry.
